The Lite-On LH-20A1H really is a Super All Write as it comes packed with features. Not only is this drive the fastest on the market by supporting 20X DVD \pm Rs, Lite-On has made it possible to take regular media and either have them finish their writing process faster or do so with fewer mistakes.

I continually am impressed by how low the price of optical drives are, but now the question is how fast can they go, but how much longer will they be around for? The media war continues to burn hot and HD-DVD and Blu-Ray DVD will soon render regular optical drives substandard.

Advantages

- *Affordable
- *20X Write speed
- *SmartWrite allows media to burn at higher speeds and higher quality

Disadvantages

- *Soon to be replaced by HD-DVD and Blu-Ray drives
